

How can a farmer use robots in crops

Procedure 1

Electrical trolley used by Tilamur

This machine is an electrical trolley with hydraulic lifting very reliable and robust. It has very low maintenance costs.

Electronic control unit used by Tilamur

This electronic control unit is capable of controlling all the environmental parameters of the greenhouse automatically. Open and close the side and overhead windows depending on the temperature inside the greenhouse. On the other hand, it controls localized irrigation based on the irrigation program entered. Ambient humidity control and general alarms
